Subject: More rain tonight into Monday morning

The storm window appears to have opened in the eastern Pacific. Saturday night's system didn't cut off as initially expected...instead, the jet stream brought some freaky weather as it whipped the vigorous cold front through. Most areas experienced at least a couple of hours of moderate-to-heavy rainfall, but overall totals were in the 0.5 to 1 inch range...which was what we had predicted...it was just the way that we got there that was different!

It's raining right now in San Luis Obispo County, and activity should slide down the coast into the greater Los Angeles area overnight. There will probably be some precipitation prior to midnight, increase a bit in intensity in the middle of the night and peak Monday morning in Los Angeles County.

There should be no jet interaction this time so rainfall rates will be much lower, on the order of 0.1"-0.2" per hour in the flats and 0.15"-0.25" in the foothills in the L.A. area. Totals will be around 0.5" to 1" in Ventura County and half that in L.A.

Gusty SW winds will accompany the system, and wind advisories are in effect in the higher elevations for winds of 20-35 mph gusting to 50.

A weak storm will follow Tuesday night-Wednesday (just 20-40% chance of any rain) and what looks to be a stronger one Friday into the weekend.
